

# C.Scope's Legendary CS1220

**W**hat with all the publicity surrounding C.Scope's CS1220R recently, detectorists are starting to look at C.Scope in a new light. C.Scope is the British metal detector which has been there ever since the early days of the hobby, more than 25 years ago. So many treasure hunters started out with a C.Scope, and a lot of those people are still using their C.Scope, a tribute to the performance and long life of these excellent machines. What is more, these long time C.Scope users have acquired a lot of detecting experience, are seriously good at using their machines, and they are the ones finding treasure these days!

There are also people who have been swayed away from C.Scope by all sorts of outrageous advertising from our competitors. Advertising which would have you believe that you need to spend £1000 on a metal detector! Advertising which seems to suggest that it is the metal detector which finds the treasure! C.Scope would like to tell you something which regularly successful detectorists have known all along.... **It is you, your experience, and the way you use your detector which gets results!** Of course you need a top class detector, one that you can get along with, and the C.Scope CS1220R gives you just that.....at a very sensible price.

All C.Scopes are top technology, designed for you, from our experience which goes right back to the beginning. The CS1220R is our latest detector, a machine totally matched to the detecting technique of the user. What is it that makes the CS1220R unique in the world of detectors? Why do so many detectorists prefer the 1220 concept, even against detectors two and three times the price?

Every metal detector has controls and these are bound to be the same, controlling sensitivity, discrimination and ground rejection. **The CS1220R is unique in the way it gives you three very different ways of working the detector controls.** Ways which have been developed over the years talking with skilled detector users about the precise way they like to use their machines.

**The CS1220R is 2 detectors in one with some really well thought out ways of working between the 2 channels.**

**SET-UP Mode** gives you instant computer control of tuning, sensitivity and volume.

**METER + AUDIO Mode.** The ground symbol will be displayed on the left side of the screen. This means that the ground setting on the machine should be adjusted to suit the soil type in the area of search. In this mode the 1220R gives low tones and a meter swing to the left on bad targets, and high tones with a meter swing to the right on probable good targets. Wide band audio discrimination gives the user tremendous confidence that the machine is working to its optimum. Every signal can be noted and analysed by its sound before deciding whether to dig or move on to the next signal.

**Meter Mode.** The ground point can be readjusted at any time during the search with the right hand rotary control. This may be necessary for example when moving from wet to dry ground, or clay to sandy soil. The actual ground setting chosen is displayed as a number between 1 and 99 so that you can note the best ground point for future reference on that particular site. In this mode the audio side of the machine probes deep and gives a positive signal on all targets. The meter swings to the left on small iron based rubbish, and to the right on everything else.

**G/D Mode.** When the 'G' push button is pressed, the ground symbol is displayed on the left side of the screen. This means

that the ground setting point can be adjusted and the machine can operate to its full potential. The intelligent CS1220R remembers your settings. In 'G' mode the detector operates at maximum power without any discrimination capability. Press the 'D' button and the discriminate symbol is displayed. Now the right hand knob controls the discrimination point, ie. the point on the scale above which certain types of metal will give an increasing tone (likely to be valuable) while below this point other types of metal will give a decreasing tone (likely to be rubbish).

With the CS1220R you get **three computer controlled search modes** representing the combined experience of a quarter of a century's worth of successful detecting. That's what makes the CS1220R a bargain at any price. It's a detector which works with you and for you and that's why the CS1220R is the best metal detector you can buy.

**More on the CS1220R and the whole price range of C.Scope detectors is available from C.Scope International Ltd. Tel: 01233 629181. E.mail: [info@cscope.co.uk](mailto:info@cscope.co.uk) Web: [www.cscope.co.uk](http://www.cscope.co.uk)**
